

**2400 West Sixth Avenue, Pine Bluff, AR** - Starting with the Third Shift, every member of the Central Moloney Team came to work on time this morning, ready to sell, build and ship transformers.

Since Friday morning's incident, Central Moloney's management and staff have been on-site 24/7, making decisions about how best to redirect our production line to avoid the fire-damaged section of our operation. Within a few hours of the event, representatives of our insurer were inside our facility, assessing damage and consulting on restoration. They have been superb partners during this situation, going so far as sending one of their jets to fly in some of our key executives who were stranded at an airport due to bad weather.

The finest restoration contractor in the Mid-South has been retained to fully handle the clean-up and rebuilding of the damaged area. Bright and early Saturday morning, our facility was swarming with their personnel, cleaning up and isolating the restoration sector. This means that Central Moloney personnel can devote our attention to what we do – selling, building and shipping transformers.

Providentially, equipment that would normally take weeks or months for delivery was available for immediate shipment and has been ordered to replace what was lost. In the interim, Central Moloney's resourceful and creative team is redirecting and repurposing our existing equipment, and production continues without missing a beat. Granted, some of our team will be inconvenienced. But our entire company is pulling together to ensure that the inconvenience is confined within our walls, and has little or no impact on our customers.

We continue to be thankful that there was not a single injury associated with the event and that it was quickly contained. We are also grateful for the relationships that we've established with some of the world's best companies in their respective fields, including yours. Through this experience, Central Moloney will be stronger and better, ready to meet our customers' needs like no other transformer manufacturer can.
